- Your Space
  - At least 30% of downtown Albuquerque is devoted to roads and parking.
  - New roads and suburban sprawl are eating up open space, farm land, and long-established neighborhoods.
- Your Money
  - The cost of personal transportation is more than 20% of most families' budgets.
  - The recent reconstruction of the Big I, though well executed, cost over $200,000,000 and will not solve our traffic problems for very long.
- Your Air
  - Personal vehicle miles travelled are currently increasing 3 times as fast as our population.
  - A proposed power plant in the South Valley would increase by 6 times the industry-derived air pollution over Albuquerque. By law, that increase would have to be met by a decrease in other pollution sources, such as motor vehicles.
- Your Community
  - New Mexico's cities can no longer afford to provide roads and utilities to new communities and fully maintain exiting neighborhoods.
  - Albuquerque's bus system is skimpy and incomplete. Many people can't or won't ride it.
  - Getting to work, school, or entertainment is becoming more expensive, time-consuming, stressful, and dangerous.

[See how passenger rail is the keystone technology that can reduce or eliminate these problems]
